

Sustainable Supply Chain Management Policy

BNBM is committed to building a sustainable supply chain and expanding its sustainable development requirements to business partners, sharing and disseminating sustainable behavior, and gradually establishing a unified sustainable supply chain development value system. Therefore, the Company has developed the Sustainable Supply Chain Management Policy to standardize all aspects of the supply chain and make it meet the development needs. All levels of affiliated companies of the Company may refer to this Policy when developing sustainable supply chain management policies of their own.

1. SUPPLIER SCREENING

The Company incorporates ESG factors such as corporate compliance qualifications, environmental management, occupational health and safety, and product quality into its supplier screening criteria. Suppliers failing to meet these ESG requirements will be excluded from the supplier access process and will not be contracted;

The Company includes business relevance in its supplier screening criteria and prioritizes cooperation with suppliers possessing green product certifications (e.g., China Green Product Certification, Environmental Labeling Certification). Their products must align with the technical and quality requirements of the ;

During supplier screening, the Company also emphasizes the prevention and control of specific risks related to suppliers (e.g., country-specific risk, sector-specific risk and commodity-specific risk) to continuously enhance supply chain risk resilience and achieve comprehensive risk management of suppliers.

2. SUPPLIER ACCESS

The Company uses a due diligence process to evaluate and select suppliers, and conducts risk assessment and admission assessment

the relevant policies and governance capabilities of enterprise management. Under the same conditions, the Company will prioritize selecting suppliers with excellent ESG management and performance for cooperation;

The evaluation results are publicly disclosed and subject to inspection and complaints from other departments.

3. CLASSIFICATION OF SUPPLIERS

The supplier management system operates on a permit-to-entry basis. The Company further manages its suppliers through a classification, based on the critical importance of the supplies, supply and delivery capabilities, credit evaluations, and supply-and-demand relations. The suppliers must fulfill the following requirements to be granted entry:

Has a legal personality;

Has obtained relevant mandatory national qualifications on quality, safety, environment, along with other necessary requirements;

Has a respectable commercial reputation and a strong track record regarding its performance, with no records of violations in its business operations in the past three years;

Has a sound and functioning quality assurance system, with no failures in the quality inspections conducted by national and local authorities and the industry authorities in the past three years; and

Any other requirements that may be dictated by this
super

develop rectification and improvement plans, and pay attention to their subsequent rectification and improvement actions . For suppliers who fail to rectify in place, the Company reserves the right to suspend and/or revoke business relationships in advance;

In order to better enhance the sustainable development performance of suppliers, the Company irregularly organizes sustainable development training for suppliers, such as the latest policies and awareness raising
